Preface

About This Document

This document provides a description of the application program interface (API) between encoders/scramblers and the Verimatrix VCAS system.

The Verimatrix VCAS Common Encoder Interface (CEI) has two encoder interfaces:

- Native
- DASH-IF Content Protection Information Exchange (CPIX)

This document describes the part of the CEI API that defines the key exchange with encoders using the [DASH-IF CPIX v2.1 specification](https://dashif.org/docs/CPIX2.1/HTML/Index.html) (<https://dashif.org/docs/CPIX2.1/HTML/Index.html>).

Who Should Use This Document

Users of this document are those trying to integrate their encoders/scramblers to the Verimatrix VCAS system.

Readers should have:

- Working knowledge of encryption and key concepts
- Understanding of encoder/scrambler functionality
- Understanding of video formats and processing
- General knowledge of the Verimatrix VCAS system
- General knowledge of the DASH-IF CPIX v2.1 specification
- Have attended Verimatrix University

Chapter 1

Overview

The CEI CPIX v1.1 is a RESTful interface using the [DASH-IF CPIX v2.1 specification](https://dash-industry-forum.github.io/docs/CPIX2.1/XSD/cpix.zip) (<https://dash-industry-forum.github.io/docs/CPIX2.1/XSD/cpix.zip>). The CEI CPIX is deployed as part of the Verimatrix VCAS CEI component.

The CEI CPIX:

- Supports the DASH-IF CPIX v2.0 and v2.1 specifications.
- Protects content with Verimatrix Internet TV, Microsoft PlayReady, Google Widevine, and Apple FairPlay Streaming digital rights management (DRM) schemes.
- Supports key rotation using multiple keys per content item.

The Verimatrix VCAS CEI CPIX interface supports the encryptor-consumer workflow described in the DASH-IF CPIX v2.1 specification. Communication between an encoder and the CEI CPIX interface occurs as follows:

1. The encoder sends a request for content and content keys in CPIX standard format to the CEI CPIX interface.
2. If the asset ID does not already exist, Verimatrix VCAS creates a content item using the asset ID in the CPIX request payload.
3. The Verimatrix VCAS system then generates a key for the passed-in key ID.
4. The CEI CPIX interface returns DRM-specific protection data to the encoder in CPIX standard format for each requested DRM system.

CEI CPIX Version Compatibility

VERIMATRIX VCAS VERSION	CEI CPIX VERSION	DASH-IF SPECIFICATION
4.3.0.0 and above	CEI CPIX v1.0	DASH-IF CPIX v2.0
4.3.1.0 and above	CEI CPIX v1.1	DASH-IF CPIX v2.1

Supported Streaming Technologies with DRMs

STREAMING TECHNOLOGY WITH DRM	DRM SYSTEM ID TO USE	CEI CPIX v1.0	CEI CPIX v1.1
MPEG-DASH with Verimatrix	Verimatrix VCAS	✓	✓
MPEG-DASH with Google Widevine	Google Widevine	✓	✓
MPEG-DASH with Microsoft PlayReady	Microsoft PlayReady	✓	✓
Microsoft Smooth Streaming with Microsoft PlayReady	Microsoft PlayReady	✓	✓
HLS AES-128 with Verimatrix	Verimatrix VCAS	✓	✓
HLS Sample-AES with Verimatrix	Verimatrix VCAS	✓	✓
HLS Sample-AES with Verimatrix using Apple FairPlay Streaming protocol	Apple FairPlay Streaming	✓	✓
HLS Sample-AES with native Apple FairPlay Streaming clients	Apple FairPlay Streaming	-	✓

You can find a list of all available DRM system IDs at the [DASH-IF identifiers catalog](http://dash-if.org/identifiers/content_protection/) (http://dash-if.org/identifiers/content_protection/), which refers to them as "Protection System-Specific Identifiers".

Chapter 2

Available Methods: CEI CPIX

This section defines the methods available within the CEI CPIX API. CPIX data structures are described in [DASH-IF Content Protection Information Exchange Format v2.1](https://dashif.org/docs/CPIX2.1/HTML/Index.html) (<https://dashif.org/docs/CPIX2.1/HTML/Index.html>).

Heartbeat

Retrieves the CEI CPIX heartbeat. Use this method to test whether the connection between the encoder/scrambler and the Verimatrix VCAS system is viable.

Request Syntax

```
GET /cpix/{version}/heartbeat
```

Request Example

```
curl -v -X GET 'http://localhost:8058/cpix/v1.1/heartbeat'
```

Request Parameters

NAME	TYPE	Occurs	Description
version	String	1..1	Version of the endpoint to access. Example: v1.1

Response Example

```
HTTP/1.1 200 OK
Content-Length: 7
SUCCESS
```

Response Parameters

HTTP CODE	TYPE	OCCURS	DESCRIPTION
200	HeartbeatResponse	1..1	Successful operation

CEI CPIX Exchange Content Key and Protection Data

The CEI CPIX interface returns DRM-specific protection data based on the list of system IDs (`systemIds`) passed in the request payload. For MPEG Common Encryption, you can list multiple `DrmSystem` elements (containing `systemIds`) in the `DrmSystemList` element of the CPIX document.

If the request system ID is missing or unknown, the Verimatrix VCAS system returns only the content key section of the response and not the DRM-specific data. If the Verimatrix VCAS system does not support some of the request system IDs, the system logs warning messages for the unsupported system IDs and returns responses for the supported system IDs.

Unlike the native CEI interface, the CEI CPIX interface does not use the DRM-enabling flags for MultiDRM solutions defined in the `cei.properties` configuration file (such as `smoothstreaming.playready.enabled`, `dash.widevine.enabled`). It does use `cpix.fairplay.verimatrix_itv.enabled` to determine if content should be added to the Internet TV network.

CEI CPIX supports the following system IDs:

DRM	SYSTEM ID	STREAMING FORMAT
Verimatrix VCAS™	9a27dd82-fde2-4725-8cbc-4234aa06ec09	MPEG-DASH HLS with AES-128 HLS with Sample-AES
Microsoft PlayReady	9a04f079-9840-4286-ab92-e65be0885f95	MPEG-DASH Microsoft Smooth Streaming
Google Widevine	edef8ba9-79d6-4ace-a3c8-27dcd51d21ed	MPEG-DASH
Apple FairPlay	94CE86FB-07FF-4F43-ADB8-93D2FA968CA2	HLS with Sample-AES

If a content item with the content ID (`contentId`) specified in the CPIX request body does not already exist in the system, the system creates the content item using the specified content ID.

NOTE The content ID does not have to be strictly xs:ID compatible. For example, the content ID may start with a number instead of a letter.

To Implement Key Rotation

To use key rotation, provide the index/position in the `contentKeyPeriod` attribute of the request body. If you do not provide the index/position, the system considers the content item to be VOD and creates a key for position 0.

To Return Verimatrix Internet TV FairPlay Streaming Data

CEI CPIX v1.1 only. By default, when the CEI CPIX v1.1 interface receives an Apple FairPlay request, it returns Multi-DRM FairPlay Streaming data. You can change this to return Verimatrix Internet TV FairPlay Streaming Data.

1. Using a text editor, open `/opt/vcas/multirights/etc/CEI/cei.properties`.
Set `cpix.fairplay.verimatrix_itv.enabled=TRUE`.
2. Save and close the file.

NOTE You can find the description of the parameters in the following request examples in the [DASH-IF CPIX v2.1 specification](#) (<https://dashif.org/docs/CPIX2.1/HTML/Index.html>).

Syntax

```
POST /cpix/v1.1
```

Request Example

VOD for Microsoft PlayReady, Google Widevine, Verimatrix ITV HLS, and Apple FairPlay Streaming

```
curl -v -X POST -H 'Content-Type: application/xml' 'http://localhost:8058/cpix/v1.1' -d

Protecting Content Using a Unique Key Per Track

This section applies only to cloud-based Verimatrix VCAS versions.

If you want to use different keys to encrypt different tracks for Widevine or PlayReady content, such as audio, SD, and HD, you can make a single request to the VCAS CPIX interface for multiple keys. Each content key must be mapped to a unique intended track type using the KID attribute.

You can still use existing keys that do not have track types.

This section describes example curl requests and responses for cloud VCAS service CPIX 1.1 supporting multiple keys for each track on MultiDRM.

Use Cases

- [Create/Retrieve content key for a single track](#) (on page 21)
 - [Create/Retrieve a single content key for all tracks](#) (on page 23)
 - [Create/Retrieve multiple content keys for multiple tracks](#) (on page 26)
- [Response codes related to requesting multiple keys](#) (on page 28)

intendedTrackType

The following table lists the possible track types for requests with intended track types. The attribute is part of the cpix:ContentKeyUsageRule element. Valid values depend on the DRM type.

INTENDEDTRACKTYPE ATTRIBUTE

DRM	DESCRIPTION
Widevine	<p>Optional. Type of media track for Widevine content.</p> <p>Valid values:</p> <ul style="list-style-type: none"> • AUDIO • SD • HD • UHD • UHD1 • UHD2 <p>NOTE UHD and UHD1 both use the security level set for UHD1.</p>
PlayReady	<p>Optional. Type of media track for PlayReady content.</p> <p>Valid values:</p> <ul style="list-style-type: none"> • AUDIO • SD • HD • UHD • UHD1 • UHD2 <p>NOTE UHD, UHD1, and UHD2 all use the security level set for UHD.</p>

Create/Retrieve Content Key for a Single Track

Request Syntax

```
curl -v -X POST -H 'Content-Type: application/xml' 'https://localhost:8058/cpix/v1.1'  
-d @input.xml
```

Request Body Example

NOTE intendedTrackType is in cpix:ContentKeyUsageRuleList

```
<?xml version="1.0" encoding="utf-8"?>  
<cpx:CPix xmlns:cpx="urn:dashif:org:cpix" xmlns:pskc="urn:ietf:params:xml:ns:keypr  
ov:pskc" contentId="dx-test7">  
    <cpx:ContentKeyList>  
        <cpx:ContentKey kid="9a04f079-9840-4286-ab92-  
be6bc9e136ef"></cpx:ContentKey>  
    </cpx:ContentKeyList>  
    <cpx:DRMSystemList>  
        <cpx:DRMSystem systemId="EDEF8BA9-79D6-4ACE-A3C8-27DCD51D21ED"  
kid="9a04f079-9840-4286-ab92-be6bc9e136ef"></cpx:DRMSystem>  
  
    </cpx:DRMSystemList>  
    <cpx:ContentKeyPeriodList>  
        <cpx:ContentKeyPeriod id="keyPeriod_9c786af2-f23f-37d2-a7f9-c94aaaf3c94fe"  
index="0"></cpx:ContentKeyPeriod>  
    </cpx:ContentKeyPeriodList>  
    <cpx:ContentKeyUsageRuleList>  
        <cpx:ContentKeyUsageRule intendedTrackType="UHD" kid="9a04f079-9840-4286-  
ab92-be6bc9e136ef"></cpx:ContentKeyUsageRule>  
    </cpx:ContentKeyUsageRuleList>  
</cpx:CPix>
```

Response Example

NOTE The CPIX document is updated to add key data to the ContentKeyList.

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<ns3:CPIX xmlns="urn:ietf:params:xml:ns:keyprov:pskc"

    </ns3:ContentKeyUsageRuleList>
</ns3:CPIX>

```

The response may have more keys than requested. In the above example, the UHD track's keyId was created earlier.

Response Codes Related to Requesting Multiple Keys

ERROR CODE	RESPONSE
400 Bad Request	<ul style="list-style-type: none">• MALFORMED_REQUEST : Parameter [kid] is duplicated in the request.• MALFORMED_REQUEST : Parameter [intendedTrackType] is duplicated in the request.• MALFORMED_REQUEST : keyIds and trackTypes size is mismatched in the request.

ERROR CODE	DESCRIPTION
OPERATION_SUCCESS	Successfully created or retrieved the key from the database
OPERATION_FAILURE	Failed to create or retrieve the key from the database
INVALID_PARAM	The parameters sent in the URL are invalid
NULL_CONTENTID	The contentId sent in the URL is null
NULL_SMSKEYID	The smsKeyId sent in the url is null
NULL_NETWORK	The networkType sent in the URL is null
INVALID_CONTENTID	The contentId sent in the URL is invalid or not present in the database
INVALID_POSITION	The position sent in the URL is invalid or not present in the database
INVALID_SMSKEYID	The smsKeyId sent in the URL is invalid or not present in the database
INVALID_PATH	The path sent in the URL is invalid
INVALID_SITEID	The sitId sent in the URL is invalid or not present in the DB
INTERNAL_SERVER_ERROR	Failed to perform the requested operation
BAD_REQUEST	The URL is not valid
MISSING_REQUEST_HEADER	HTTP headers are missing
DUPLICATE_KEY	The key provided in the request is already present in the database
INVALID_NETWORK	The networkType sent in the URL is invalid or not present in the database
INVALID_START_POSITION	The start position provided in the URL is invalid
INVALID_POSITION_INCREMENT	The position increment provided in the URL is invalid
INVALID_KEY_COUNT	The key count provided in the URL is invalid

Appendix A

Response Codes

NUMBER	ERROR MESSAGE	HTTP STATUS	DESCRIPTION
1	INVALID_CONTENTID	400 Bad Request	contentId attribute does not contain a valid content ID
2	INVALID_POSITION	400 Bad Request	index attribute is empty or negative when request payload contains ContentKeyPeriodList
3	MALFORMED_REQUEST	400 Bad Request	Key ID is missing; ContentKeyList is missing or empty
4	MALFORMED_KEYID	400 Bad Request	kid attribute is not a 16 byte canonical UUID formatted string
5	OPERATION_FAILURE (with MEI status code)	500 Internal Server Error	Multi-DRM Encryption Interface (MEI) failed to create content or key
6	OPERATION_FAILURE	500 Internal Server Error	Missing values in the cei.properties file

Preface

About This Document

This document provides a description of the application program interface (API) between encoders/scramblers and the Verimatrix VCAS system.

The Verimatrix VCAS Common Encoder Interface (CEI) has two encoder interfaces:

- Native
- DASH-IF Content Protection Information Exchange (CPIX)

This document describes the part of the CEI API that defines the key exchange with encoders using the native specification. This document describes both CEI v2.0 and CEI v1.1.

Who Should Use This Document

Users of this document are those trying to integrate their encoders/scramblers to the Verimatrix VCAS system.

Readers should have:

- Working knowledge of encryption and key concepts
- Understanding of encoder/scrambler functionality
- Understanding of video formats and processing
- General knowledge of the Verimatrix VCAS system
- Have attended Verimatrix University

Chapter 3

Overview

The Common Encoder Interface (CEI) is a RESTful interface using JavaScript Object Notation (JSON) format for the request body.

The primary functionality of the CEI is:

- Protection of content with multiple digital rights management (DRM) schemes (simultaneously)
- Support multiple keys per content item
- Support for content policies (copy controls, offline playback, and others)

Communication between an encoder and the CEI v2.0 occurs as follows:

3. Encoder requests the creation of a new content item using the [Create Asset](#) (on page 3) request.
4. Encoder requests creation of a new key using the [Create Key](#) (on page 7) request.
5. Encoder requests a content key using one of the following methods:
 - [Get Key by assetId and position](#) (on page 12)
 - [Get Key by assetId and keyId](#) (on page 17)
 - [Get Key by keyId](#) (on page 22)
6. Optional. Encoder sends a periodic [Heartbeat](#) (on page 26) request to ensure that the connection between the encoder and the CEI is still alive.

Communication between an encoder and the CEI v1.1 occurs as follows:

7. Encoder requests the creation of a new content item using the [Create Content](#) (on page 27) request. In the scope of the Verimatrix VCAS deployment, the content is uniquely identified by the `contentId`. In the case of multiple Verimatrix VCAS deployments, an optional deployment specific `siteId` can be prepended to the `contentId`. The pair, `siteId:contentId`, constitutes a unique content identifier across all the Verimatrix VCAS deployments.
8. Encoder requests a content key using the [Create/Retrieve Key](#) (on page 29) request. The encoder must include the `contentId` and the `timestamp` in the request. The response to the Create/Retrieve key request includes the `key`, `key ID`, and the metadata specific to each DRM enabled on the Verimatrix VCAS

- system. The encoder can issue multiple key requests per content item; each with a different timestamp.
9. Optional. Encoder sends a periodic [Heartbeat](#) (on page 36) request to ensure that the connection between the encoder and the CEI is still alive.

Chapter 4

Available Methods: CEI v2.0

This section describes the methods available in the CEI v2.0 API.

URI Scheme

BasePath: /cei/v2.0

Create Asset

Creates a content item based on the passed-in parameters. In the scope of the Verimatrix VCAS deployment, the `assetId` uniquely defines the content. In the case of multiple Verimatrix VCAS deployments, the encoder can optionally prepend a deployment specific `siteId` to the `assetId`. The pair, `siteId:assetId`, constitutes a unique content identifier across all the Verimatrix VCAS deployments.

An encoder must send this request before sending any `Create Key` request for a content item.

Request Path

```
POST /cei/v2.0/assets?siteId={siteId}&position={position}
```

Request Body

```
{
  "createAssetRequest" : {
    "assetId": string,
    "assetType": string
  }
}
```

Request Example

```
curl -v -X POST 'http://localhost:8058/cei/v2.0/assets?siteId=1&position=1' -H  
'Content-Type: application/json'  
-d '{  
    "createAssetRequest" : {  
        "assetId": "test",  
        "assetType": "DTV"  
    }  
}'
```

Request Parameters

NAME	TYPE	OCCURS	DESCRIPTION
siteId	Integer	0..1	<p>Optional. Unique identifier for the site. Use a site identifier to differentiate between operators.</p> <p>If you do not provide a <code>siteId</code>, the method uses the local <code>siteId</code> from the license.</p> <p>Example: 121</p>
position	Long	0..1	<p>Optional. Epoch time associated with the start time of the asset.</p> <p><code>position</code> applies only to DTV assets. If added to a VOD asset, it is ignored.</p> <p>Default: Current epoch time</p> <p>Valid range: 0 – 2147483647 (00:00:00 1-Jan-1970 - 03:14:07 19-Jan-2038 UTC)</p>
assetId	String	1..1	<p>Unique identifier for the content.</p> <p>Example: test</p> <p>Default: none</p>
assetType	String	1..1	<p>Content delivery type.</p> <p>Valid values:</p> <ul style="list-style-type: none"> • VOD • DTV

Response Example

```
HTTP/1.1 200 OK
{
  "createAssetResponse": {
    "status": "OK",
    "statusMessage": "Successfully created asset with assetId=test and siteId=1"
  }
}
```

Response Parameters

HTTP Code	Type	Occurs	Description
200	createAssetResponse (on page 39)	1..1	Response object containing status information

For information on other possible HTTP responses, refer to [Error Codes](#) (on page **Error! Bookmark not defined.**).

Create Key

Creates a key in a specified position for an existing content item.

Request Path

```
POST /cei/v2.0/assets/{assetId}/keys?siteId={siteId}
```

Request Body

```
{
  "createKeyRequest" : {
    "position": long
  }
}
```

Request Parameters

NAME	TYPE	Occurs	Description
assetId	String	1..1	<p>Unique identifier for the content item.</p> <p>assetId is the same as the assetId that you defined during content item creation. For more information, refer to Create Asset (on page 3).</p> <p>Example: test</p>
position	Long	1..1	<p>Epoch time or index of the position.</p> <p>position must not be a negative number.</p> <p>If the key is for Internet TV DTV content then position must be epoch time.</p> <p>Epoch time must be in the future.</p> <p>Examples:</p> <ul style="list-style-type: none"> • 1458172978 • 1
siteId	Integer	0..1	<p>Optional. Unique identifier for the site. Use a site identifier to differentiate between operators.</p> <p>If you do not provide a siteId, the method uses the local siteId from the license.</p> <p>Example: 1</p>

Request Example

```
curl -v -X POST 'http://localhost:8058/cei/v2.0/assets/test/keys?siteId=1' -H
'Content-Type: application/json'
-d '{"createKeyRequest": {"position": 1 }}'
```

Response Example

```

HTTP/1.1 200 OK
{
    "keyResponse": {
        "status": "OK",
        "statusMessage": "Successfully created key for assetId=test, position=1,

```

Response Parameters

HTTP CODE	TYPE	OCCURS	DESCRIPTION
200	KeyResponse (on page 43)	1..1	Key response object containing information about the content keys for different DRM types.

For information on other possible HTTP responses, refer to [Error Codes](#) (on page **Error! Bookmark not defined.**).

Get Key by assetId and Position

Retrieves a key for a content item with a given `assetId` and `key` position.

Request Path

```
GET /cei/v2.0/assets/{assetId}/keys?position=1&siteId=1
```

Request Parameters

NAME	TYPE	Occurs	Description
assetId	String	1..1	<p>Unique identifier for the content item.</p> <p><code>assetId</code> is the same as the <code>assetId</code> that was defined during creation of the content item. For more information, refer to Create Asset (on page 3).</p> <p>Example: test</p>
position	Long	1..1	<p>Epoch time or index for which the encoder is requesting the key.</p> <p><code>position</code> is the same as the <code>position</code> that was defined during creation of the key. For more information, refer to Create Key (on page 7).</p> <p>Example: 1458172978</p>
siteId	Integer	0..1	<p>Optional. Unique identifier for the site. Use a site identifier to differentiate between operators.</p> <p>If you do not provide a <code>siteId</code>, the method uses the local <code>siteId</code> from the license.</p> <p>Example: 121</p>

Request Example

```
curl -v -X GET 'http://localhost:8058/cei/v2.0/assets/test/keys?siteId=1&position=1'
```

Response Example

```

Response Parameters

HTTP CODE	TYPE	OCCURS	DESCRIPTION
200	KeyResponse (on page 43)	1..1	Key response object containing information about the content keys for different DRM types.

For information on other possible HTTP responses, refer to [Error Codes](#) (on page **Error! Bookmark not defined.**).

Get Key by assetId and keyId

Retrieves a key for a content item with a given `assetId` and `keyId`.

Request Path

```
GET /cei/v2.0/assets/{assetId}/keys/{keyId}?siteId=1
```

Request Parameters

NAME	TYPE	Occurs	Description
assetId	String	1..1	<p>Unique identifier for the content item.</p> <p><code>assetId</code> is the same as the <code>assetId</code> that you defined during content item creation. For more information, refer to Create Asset (on page 3).</p> <p>Example: test</p>
keyId	Long	1..1	<p>Unique key identifier in UUID format.</p> <p><code>keyId</code> is the same as the <code>keyId</code> returned by the CEI during key creation. For more information, refer to Create Key (on page 7).</p> <p>Example: ff6d1220-65d7-8d39-804c-deb4dca38d76</p>
siteId	Integer	0..1	<p>Optional. Unique identifier for the site. Use a site identifier to differentiate between operators.</p> <p>If you do not provide a <code>siteId</code>, the method uses the local <code>siteId</code> from the license.</p> <p>Example: 121</p>

Request Example

```
curl -v -X GET 'http://localhost:8058/cei/v2.0/assets/test/keys/ff6d1220-65d7-8d39-  
804c-deb4dca38d76?siteId=1'
```

Response Example

```

For information on other possible HTTP responses, refer to [Error Codes](#) (on page **Error! Bookmark not defined.**).

Get Key by keyId

Retrieves a key for a given `keyId`.

Request Path

```
GET /cei/v2.0/keys/{keyId}?siteId=1
```

Request Parameters

NAME	TYPE	OCCURS	DESCRIPTION
keyId	Long	1..1	<p>Unique key identifier in UUID format.</p> <p><code>keyId</code> is the same as the <code>keyId</code> returned by the CEI during key creation. For more information, refer to Create Key (on page 7).</p> <p>Example: ff6d1220-65d7-8d39-804c-deb4dca38d76</p>
siteId	Integer	0..1	<p>Optional. Unique identifier for the site. Use a site identifier to differentiate between operators.</p> <p>If you do not provide a <code>siteId</code>, the method uses the local <code>siteId</code> from the license.</p> <p>Example: 1</p>

Request Example

```
curl -v -X GET 'http://localhost:8058/cei/v2.0/keys/ff6d1220-65d7-8d39-804c-deb4dca38d76?siteId=1'
```

Response Example

```

            }
        }
    ]
}
```

Response Parameters

HTTP CODE	TYPE	OCCURS	DESCRIPTION
200	KeyResponse (on page 43)	1..1	Key response object containing information about the content keys for different DRM types.

For information on other possible HTTP responses, refer to [Error Codes](#) (on page [Error! Bookmark not defined.](#)).

Heartbeat

Retrieves the CEI heartbeat to check if the CEI endpoint is alive.

Request Syntax

```
GET /cei/2.0/heartbeat
```

Request Parameters

None

Request Example

```
curl -v -X GET 'http://localhost:8058/cei/v2.0/heartbeat'
```

Response Example

```
HTTP/1.1 200 OK
SUCCESS
```

Response Parameters

HTTP CODE	TYPE	OCCURS	DESCRIPTION
200	HeartbeatResponse (on page 48)	1..1	Data structure that contains the heartbeat response.

For information on other possible HTTP responses, refer to [Error Codes](#) (on page **Error! Bookmark not defined.**).

Available Methods: CEI v1.1

This section describes the methods available in the CEI v1.1 API.

Create Content

Generates a content item based on the passed-in parameters. When the Verimatrix VCAS system receives the Create Content request, it ensures that the content item exists in the Verimatrix VCAS database. If the content item doesn't exist, it is created.

An encoder must send this request before sending any Create/Retrieve Key request for a given content item.

Request Syntax

```
PUT /cei/{version}/content/{contentId}?siteId={siteId}
```

Request Example

```
curl -X PUT --header 'Content-Type: application/json' --header 'Accept: application/json'
'http://localhost:8058/cei/v1.1/content/sample_video?siteId=121' -d '{
    "contentRequest": {
        "siteId": "121",
        "contentId": "sample_video",
        "contentType": "VOD",
        "streamingProtocol": "SS",
        "encryptionAlgorithm": "AES_CTR",
        "keyRotation": {
            "chainedLicense": "FALSE",
            "cryptoPeriod": "1800"
        }
    }
}'
```

Request Parameters

NAME	TYPE	Occurs	Description
version	String	1..1	Version of the endpoint to access. Example: v1.1
contentId	String	1..1	Unique identifier for the content. Example: sample_video Default: none
siteId	Integer	0..1	Unique identifier for the site. Use a site identifier to differentiate between operators. If you do not provide a siteId, the method uses the local siteId from the license.
body	ContentRequest (on page 38)	1..1	Parameters to use to generate the content item.

Response Example

```
{  
    "contentResponse": {  
        "statusCode": "OPERATION_SUCCESS",  
        "statusMessage": "Successfully created content for contentId=sample_video"  
    }  
}
```

Response Parameters

HTTP CODE	TYPE	OCCURS	DESCRIPTION
200	ContentResponse (on page 41)	1..1	Successful operation

Create/Retrieve Key

Creates and returns the key for the passed-in content ID. The CEI currently supports single key creation and retrieval requests only.

NOTE The attributes `keyId` and `key` parameters inside the `ContentKey` node are optional request parameters and are reserved for future use; the encoder only sets the `position` sub-element.

Request Syntax

```
PUT /cei/{version}/content/{contentId}/position/{position}/key?siteId={siteId}
```

Request Example

```
Create/Retrieve key request example :  
curl -X PUT --header 'Content-Type: application/json' --header 'Accept:  
application/json'  
'http://localhost:8058/cei/v1.1/content/test_get_key_01/position/1/key?siteId=1' -d '  
{  
"keyRequest": {  
"contentInfo": {  
"contentId": "test_get_key_01",  
"siteId": 1,  
"keyCount": "1",  
"contentKeyList": [  
{  
"position": "1"  
}  
]  
}  
}  
}  
}'
```

Request Parameters

NAME	TYPE	OCCURS	DESCRIPTION
version	String	1..1	Version of the endpoint to access. Example: v1.1
contentId	String	1..1	Unique identifier for the content item. Example: sample_video
position	Long	1..1	Epoch position. Example: 1458172978
siteId	Integer	0..1	Unique identifier for the site. Use a site identifier to differentiate between operators. If you do not provide a siteId, the method uses the local siteId from the license. Example: 121
body	KeyRequest (on page 41)	1:1	Key request details.

Response Example

```
{
  "keyResponse": {
    "statusCode": "OPERATION_SUCCESS",
    "statusMessage": "Successfully retrieved key and created DRM data for contentId = test_get_key_01",
    "drmList": [

Response Parameters

HTTP CODE	TYPE	OCCURS	DESCRIPTION
200	KeyResponse (on page 43)	1..1	Successful operation.

Heartbeat

Retrieves the CEI heartbeat.

Request Syntax

```
GET /cei/{version}/heartbeat
```

Request Parameters

Name	Type	Occurs	Description
version	String	1..1	Version of the endpoint to access. Example: v1.1

Response Parameters

HTTP CODE	TYPE	OCCURS	DESCRIPTION
200	HeartbeatResponse (on page 48)	1..1	Successful operation

Chapter 6

Data Structures

This section describes all of the complex data structures within the CEI API.

ContentRequest

Data structure that contains information about the content item to create.

NAME	TYPE	Occurs	Description
siteId	Integer	0..1	Unique identifier of the site for which the content is being created. Use to differentiate operators.
contentId	String	1..1	Unique identifier of the content item to encrypt.
contentType	String	1..1	Content type. Valid values: <ul style="list-style-type: none"> • VOD • DTV
streamingProtocol	String	1..1	HTTP streaming protocol. Valid values: <ul style="list-style-type: none"> • HDS • DASH • HLS • SS
encryptionAlgorithm	String	1..1	Encryption algorithm to use. Valid values: <ul style="list-style-type: none"> • AES_CBC • AES_CTR
keyRotation	KeyRotation (on page 40)	1..1	Key rotation details such as crypto period, policy, and other key rotation information.

CreateAssetResponse

Data structure returned by the Create Asset method.

NAME	TYPE	OCCURS	DESCRIPTION
statusCode	String	1..1	<p>Status of operation.</p> <p>Valid values:</p> <ul style="list-style-type: none">• OK• INVALID_ASSETID• INVALID_ASSET_TYPE
statusMessage	String	0..1	Descriptive status message.

KeyRotation

Data structure that contains the key rotation specifics.

NAME	TYPE	Occurs	Description
chainedLicense	Boolean	1..1	<p>Reserved for future use. Flag that indicates whether the DTV content item is chained; if so, licenses are required.</p> <p>This flag is required if the key rotation is controlled by the Verimatrix VCAS system.</p> <p>The Verimatrix VCAS system provides a license in the key response which contains the basic policies and the encryption key for the content.</p> <p>A chained license is a series of associated licenses that collectively specify content keys and policies for one or more media files. Each license chain includes a root license and one or more leaf licenses that are associated with and dependent on the root license.</p> <p>Default: FALSE (case-sensitive)</p>
cryptoPeriod	Integer	1..1	<p>Time period for which the key is valid.</p> <p>If set to zero ("0"), the key is used for the life of the content.</p> <p>Unit: Seconds</p>

ContentResponse

Data structure returned by the Create Content method.

NAME	TYPE	OCCURS	DESCRIPTION
statusCode	String	1..1	<p>Status of operation.</p> <p>Valid values:</p> <ul style="list-style-type: none"> • OPERATION_SUCCESS • INVALID_SITEID • INVALID_CONTENTID • DUPLICATE_CONTENT • UNSUPPORTED_STREAMING_PROTOCOL • INVALID_CRYPTOPERIOD • INVALID_CONTENT_TYPE • INTERNAL_ERROR • INVALID_ENCRYPTION_ALGORITHM • OPERATION_FAILURE
statusMessage	String	0..1	Descriptive status message.

KeyRequest

Key information object returned for a specified content item.

NAME	TYPE	OCCURS	DESCRIPTION
contentInfo	ContentInfo (on page 42)	1..1	Key information for the specified content item.

ContentInfo

Data structure that contains content and key information.

NAME	TYPE	OCCURS	DESCRIPTION
contentId	String	1..1	Unique identifier of the content item for which keys are being requested.
siteId	String	0..1	Unique identifier of the site to which the content is associated. Use to differentiate between operators.
contentKeyList	ContentKey (on page 46)	1..1	key/keyId pair generated by the Verimatrix VCAS system.
keyCount	Integer	1..1	<p>Number of keys being requested.</p> <p>Valid values: 1</p> <p>Currently, the CEI only supports single key requests.</p> <p>If <code>keyCount</code> does not exist or is zero, a single key is returned.</p>

KeyResponse

Key response object containing information about the content keys for different DRM types.

NAME	TYPE	OCCURS	DESCRIPTION
statusCode	String	1..1	<p>Status of operation.</p> <p>Valid values:</p> <ul style="list-style-type: none"> • OPERATION_SUCCESS • INVALID_DRM_CONFIGURATION • INTERNAL_ERROR • INVALID_CONTENTID • INVALID_SITEID • INVALID_POSITION • OPERATION_FAILURE
statusMessage	String	0..1	Descriptive status message.
drmList	Array of DrmContent (on page 44)	1..1	Array of DRM data requested by the encoder; including keys, PSSH, and DRM information.

DrmContent

Data structure that contains the DRM information requested by the encoder.

NAME	TYPE	Occurs	Description
keyData	Array of KeyData (on page 45)	1..1	Array of DRM data and content key information.
streamingProtocol	String	1..1	<p>Type of HTTP streaming protocol.</p> <p>Valid values:</p> <ul style="list-style-type: none"> • HLS • ADS • DASH • SS
drmName	String	1..1	<p>Name of the DRM for which the information is being returned.</p> <p>Valid values:</p> <ul style="list-style-type: none"> • PLAYREADY • WIDEVINE • ADOBE_PRIMETIME • VERIMATRIX_ITV • FAIRPLAY_STREAMING

KeyData

Data structure that contains the DRM data and content key information.

NAME	TYPE	OCCURS	DESCRIPTION
contentKey	ContentKey (on page 46)	1..1	key/keyId pair generated by the Verimatrix VCAS system.
drmData	DrmData (on page 47)	1..1	DRM data, such as DRM system ID, DRM name, PSSH, and manifest header.

AssetKey

CEI v2.0 and above only. Data structure that contains the key/keyId pair generated by the Verimatrix VCAS system.

NAME	TYPE	OCCURS	DESCRIPTION
keyId	String	0..1	Unique identifier of the content key, provided by the Verimatrix VCAS system as a normalized UUID.
key	String	0..1	16-byte content key used for encryption, provided by the Verimatrix VCAS system.
position	Long	1..1	Epoch time or index for which the encoder is requesting the key. Valid values: 0 or positive integer
iv	String	0..1	FairPlay Streaming only. 16-byte initialization vector associated with the content key.

ContentKey

CEI v1.1 and earlier only. Data structure that contains the key/keyId pair generated by the Verimatrix VCAS system.

NAME	TYPE	OCCURS	DESCRIPTION
keyId	String	0..1	Unique identifier of the content key, provided by the Verimatrix VCAS system as a normalized UUID.
key	String	0..1	16-byte content key used for encryption, provided by the Verimatrix VCAS system.
position	Long	1..1	Time for which the encoder is requesting the key. For Widevine content, this is the time since the epoch for the first key period divided by the period duration. Unit: Seconds
iv	String	0..1	FairPlay Streaming only. 16-byte initialization vector associated with the content key.

DrmData

Data structure that contains the DRM data.

NAME	TYPE	Occurs	Description
drmSystemId	String	1..1	Unique identifier of the DRM system.
manifestHeader	String	0..1	Content protection section to be inserted into the MPD.
licenseServerUrl	String	0..1	Adobe Primetime/FPS only. License server URL.
pssh	String	0..1	PSSH signalization information blob for each DRM to be inserted in the content, as a base64 string.
keyUrl	String	0..1	Verimatrix ITV only. Key URL.
keyUri	String	0..1	FairPlay Streaming only. Value that an encoder uses as the <code>assetId</code> if the <code>INTERPRET_ASSET_ID</code> parameter in the <code>FPSA.INI</code> file is set to <code>contentId</code> . Format: <code>r=<url encoded contentId>&s=<siteId></code> <ul style="list-style-type: none"> • <code>contentId</code> = URL encoded content ID. • <code>siteId</code> = If Content Distribution is deployed, this value must contain the unique ID of the site that is to receive the content.

HeartbeatResponse

Data structure that contains the heartbeat response.

NAME	TYPE	OCCURS	DESCRIPTION
statusCode	String	1..1	<p>Heartbeat status code.</p> <p>Valid values:</p> <ul style="list-style-type: none">• OPERATION_SUCCESS• OPERATION_FAILURE
statusMessage	String	0..1	Message describing the status.

Appendix B Error Codes

The following table describes the response codes that an encoder may receive while using the CEI v2.0.

HTTP STATUS	STATUS CODE	DESCRIPTION
400	INVALID_PARAM	<ul style="list-style-type: none">assetType is missing or invalid Ensure that assetType is VOD or DTV.assetId is missing
400	INVALID_SITEID	siteId (if present in request) is invalid Ensure that value of siteId is not zero or negative.
400	MALFORMED_KEYID	keyId is not valid Ensure that keyId is a 16 byte canonical UUID formatted string.
400	INVALID_POSITION	position is missing or negative
403	CONTENT_NOT_CREATED	DTV content limit reached for Internet TV network
404	CONTENT_NOT_FOUND	Unable to retrieve content from database due to missing content
404	KEY_NOT_FOUND	Unable to retrieve key from the database due to missing key
500	CONTENT_NOT_CREATED	Failed to add content to the Multi-DRM database due to missing network
500	KEY_NOT_CREATED	Unable to create key
500	OPERATION_FAILURE	Error in preparing DRM data
500	INTERNAL_ERROR	Unexpected error in processing request
